

Avira System Speedup

Avira Game Booster optimizes your PC for gaming

PC tune-up for Windows

Avira System Speedup delivers peak PC performance – with one click. It's the Swiss army knife of tune-up tools that cleans your customers' PCs, increases their speed, and removes all traces of their browsing activities. Additional privacy safeguards, such as file encryption and a file shredder, prevent snoops from accessing their confidential files.

Avira Game Booster, part of Avira System Speedup Gamer Edition, squeezes maximum performance out of your PC.

Frustrated by long loading times or choppy gameplay?

With Avira Game Booster you can put an end to all of this. The precious resources and memory that complex games often require are freed up as Game Booster manages and disables processes and applications which you don't need for gaming (like business apps or tools that run in the background). Thanks to this, you can say goodbye to issues like choppy graphics and jittery gameplay. Avira Game Booster also defragments your game folders, meaning that as your hard drive's read/write heads work less and the data is located in a fast area of the disk, loading is super-fast. Reckon you can't get even more speed out of your SSD? Simply enable Drive Booster and it'll put unused memory to use giving you an extra shot of speed.

No more hassle of reconfiguring your system settings – just start your gaming session. Once you're done gaming, Avira Game Booster will reset your PC to its original pre-gaming state.
