

# Avira Online Essentials

Managing your security just got a whole lot easier

Protection against cyber threats within companies is largely dependent on one key question: How is each device protected and what is the current security status of all my computers and mobile devices? Avira Online Essentials, the new Avira management platform, solves this problem with ease. Thanks to this solution, as a user you can view and manage all Avira security applications and other services centrally. You can access the Dashboard via any web browser, see an overview of all linked devices, plus add and update security modules for each device whenever you need.

**EVERYTHING AT A GLANCE:** Avira Online Essentials is a hybrid solution that connects the web-based Dashboard with client applications on each device. This Dashboard lets users add, delete, and edit key security functions on any computer or device they own.

Check. View. Coordinate. Manage.

**Avira Online Essentials.** The easiest way to take control of your security.

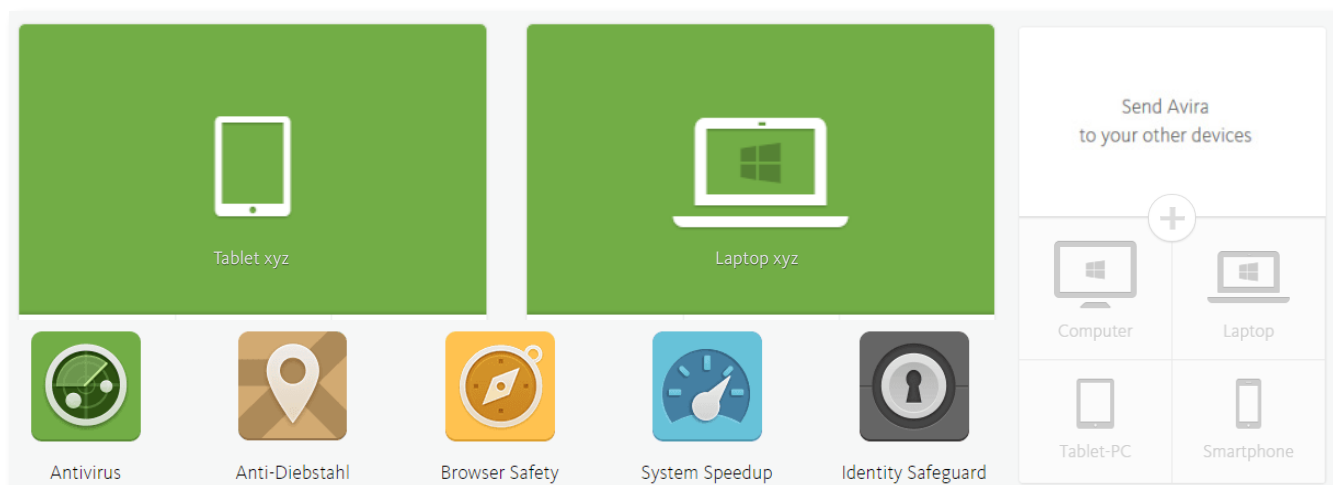

# Avira Online Essentials

## Avira Online Essentials has the following functions:

- View the status of your current devices/products
- Check your license information without needing to sign into your account
- Display the scan report
- See your devices' system information (operating system, memory, disk utilization)
- View the status of your local antivirus solution directly in the OE Dashboard
- Add users and devices plus mobile devices to your Dashboard
- See at a glance what events have occurred on your managed devices
- Connect remotely to your managed devices

### OE Launcher:

- Quick and easy installation thanks to 1-click installer
- Automatic installation of antivirus components
- Direct access to the web-based OE Dashboard without needing to enter login credentials again
- Install Avira Browser Safety (available for Firefox, Chrome, and Internet Explorer), Avira System Speedup, and Dropbox

## Additional mobile functions:

### Directly on the OE Dashboard:

- Location Services
- Wipe data
- Alert function
- Lock device
- Device report
- Scan result viewer

### On the app:

- Identity Safeguard
- Blacklist
- Antivirus (incl. Scheduler)
- Anti-theft available locally

### Paid version:

- Safe surfing (uses AUC technology), hourly updates, Premium Support
